

	n_{est}	depth	η	sub-sample	colsample	min_ch_wt	λ
Parent 1	0.62	0.28	0.45	0.80	0.35	0.20	0.70
Parent 2	0.24	0.72	0.18	0.40	0.78	0.62	0.30

every real value inside the interval is reachable —
no discretization step, unlike a binary-coded gene

Offspring 1	0.51	0.78	0.43	0.42	0.43	0.66	0.18
After mutation	0.51	0.78	0.60	0.42	0.43	0.52	0.18

perturbed by
 $N(0, \sigma^2)$
